1. Objective

Ocean: Frontal survey CTD/MSS and MVP; atmosphere: LIDAR, Radar. Switched Radiosondes back to every 4h. Start frontal survey with IATALANTE. Launch cloud kite to test a new mounting of the sensor packages (test with Zarges box). Continue MSS indicating intense vertical mixing at the boundary between two eddies and close to the surface. Suspect air/sea response. The cloudkite was flying much more stable with the new mounting.
